

HerHealth AI

Customer & MVP Blueprint

Extracted from Startup Validation Report · Founder: Tannu Kaushik · FemTech | AI Healthcare | Digital Health · Stage: Prototype / Early Validation

EXTRACTED FROM	REPORT
Startup	HerHealth AI — AI-powered women's health platform
Problem	Fragmented, inaccessible, non-personalised menstrual health tools
Target Users	Women 18–40, urban/semi-urban India
Competitors	Flo, Clue, Maya (all lacking AI depth + India focus)
Validation	Prototype built · Early user conversations · No revenue yet
Viability Score	8.38 / 10 · Recommendation: ■ GO

■ PROMISING BUT UNVALIDATED — Strong idea, real gap. Build & test fast.

01 EXECUTIVE SUMMARY

HerHealth AI, founded by Tannu Kaushik, is an AI-powered women's health platform targeting Indian women aged 18–40. It combines cycle tracking, symptom analysis, lifestyle monitoring, AI chatbot support, and exportable health reports in one platform. The startup validation report scores it 8.38/10 with a GO recommendation. The critical next step is moving from prototype to a tight MVP validated by real users — before pursuing seed capital.

Dimension	Insight	Signal
Market	India FemTech growing 15–18% CAGR; AI healthcare at 35%+	■ Strong
Problem	Fragmented tools, no AI personalisation, no doctor reports	■ Validated
Competition	Flo/Clue lack India focus; Maya lacks AI — clear white space	■ Favourable
Founder Fit	MCA tech skills, built prototype, high passion	■ Good-Developing
Validation	Prototype + early conversations; no revenue, no paying users	■ Early
Regulatory	DPDP Act 2023 applies; health data compliance critical	■ Risk

02 IDEAL CUSTOMER PROFILE (ICP)

Attribute	ICP A — Urban Working Woman	ICP B — College Student	ICP C — Gynaecologist (B2B)
Age	22–35	17–22	30–55
Location	Metro + Tier-1 cities	Urban hostels, college campuses	Pan-India private clinics
Income	■4–15 LPA	Dependent / ■500–2K discretionary	■15–50 LPA
Tech use	3+ health apps, smartphone-first	Social media native	Basic digital tools
Core need	Personalised AI health answers	Safe, non-judgmental health space	Structured patient history
WTP	■99–■199/month	Free → ■49–■99/month	■2,999–■9,999/year
Channel	Instagram, Google, app store	TikTok, Reels, WhatsApp	LinkedIn, medical conferences

03 BUYER PERSONA

■■■ PRIYA, 26 · Bengaluru

Software engineer. Irregular cycles from stress. Self-diagnoses on Google. Wants AI that explains WHY her period changed, not just predicts the next one.

Pain: No single tool connects her stress, sleep & cycle data.

Trigger: Missed period → panic search → downloads app.

Objection: "Is my data safe with an AI app?"

■■■ ANANYA, 20 · Pune (Hostel)

2nd-year B.Com student. Embarrassed about menstrual pain. Spends ₹300/mo on self-care. Follows health influencers. Needs judgment-free, private guidance.

Pain: No safe, private space for reproductive health Q&A.;

Trigger: Health reel on Instagram → taps link → downloads.

Objection: "Too expensive for a student on pocket money."

04 TOP 10 CUSTOMER PAIN POINTS

#	Priority	Pain Point	Impact
#1	■ CRITICAL	No AI personalisation	Generic period apps ignore lifestyle, stress, diet — no "why" behind symptoms.
#2	■ CRITICAL	Healthcare access barrier	₹500–₹2,000 per gynaecologist visit; long waits; rural women have no access at all.
#3	■ CRITICAL	Fragmented health data	Period in Clue, fitness in Fitbit, mood in notes app — no unified health picture.
#4	■ CRITICAL	No doctor-shareable record	Every clinic visit starts from zero; no structured menstrual/symptom history.
#5	■ HIGH	Menstrual taboo	Social stigma blocks open health conversations; AI chatbot offers safe anonymity.
#6	■ HIGH	Irregular cycle anxiety	Unexplained late/missed periods cause fear; pattern detection provides peace of mind.
#7	■ HIGH	Poor health literacy	Medical jargon in apps confuses users; plain AI explanations dramatically improve trust.
#8	■ MEDIUM	No lifestyle-cycle correlation	Sleep, stress, exercise effects on cycles are not shown in any current Indian app.
#9	■ MEDIUM	Privacy fears	Women fear period data being shared with family, employers, or insurers.
#10	■ MEDIUM	PCOS/Endo late detection	Early symptom patterns go unrecognised; AI flagging could accelerate diagnosis.

05 CUSTOMER JOURNEY MAP

Stage	User Action	HerHealth AI Touchpoint	Emotion	KPI
■ AWARENESS	Sees IG reel, WhatsApp forward from friend	Abhinav's Instagram reel, HerHealth AI Store listing, SEO blog	Curious / Anxious	Impressions, CTR
■ CONSIDERATION	Searches 'best period app India'	App Store page, comparison content, testimonials	Evaluating	Store visits, Installs
■ TRIAL (FREE)	Downloads; enters cycle data; tries AI chatbot	Onboarding flow, free AI Q&A, first cycle report	Hopeful / Surprised	D1 activation rate
■ PURCHASE	Tries to export report or unlock AI insights	Upgrade prompt, annual plan offer	Decisive	Free→Paid CVR
■ RETENTION	Logs data daily; gets monthly AI report	Push notifications, monthly health summary	Engaged / Loyal	D30/D60 retention
■ ADVOCACY	Shares app in hostel group; refers friend	Referral program, WhatsApp share card	Champion	NPS, referral rate

06 KEY OBJECTIONS & BUYING TRIGGERS

■ TOP OBJECTIONS

Objection	Counter-Strategy
"Is my health data safe?"	DPDP Act compliance + end-to-end encryption
"Flo is free and good enough"	HerHealth has AI chatbot, lifestyle linkers
"AI might give wrong advice"	All AI outputs carry disclaimer; prompt engineering
"₹199/mo is too much"	Freemium tier free forever; annual plan discount
"Family might see this app"	Disguised icon 'Health Diary'; no period icon

■ BUYING TRIGGERS

Trigger	Activation
Missed / irregular period	Anxiety → Google search → discovers HerHealth AI
Health influencer reel	1-tap from Instagram/YouTube to Play Store
Doctor frustration	Leaves consultation unheard → seeks digital complement
Peer recommendation	WhatsApp hostel group forward → installs same night
Corporate wellness plan	Employer onboards → zero-friction B2B acquisition

07 MVP RECOMMENDATION

Based on extracted pain points and ICP analysis, the MVP must solve the top 3 critical pains in the simplest possible way: personalised AI insights, unified cycle + lifestyle tracking, and exportable doctor reports. Everything else is a distraction until 500+ active users are retained.

■ BUILD FIRST (MVP Core)	■ DO NOT BUILD YET
Cycle entry + period prediction (basic)	Social/community features
Symptom + mood + lifestyle daily log	Fertility / pregnancy planning module
AI chatbot (pre-set Q&A + GPT-lite)	Wearable device integrations
Monthly AI-generated health insight card	Multilingual support (Hindi etc.) — Phase 2
PDF report export (shareable with doctor)	Telehealth booking / doctor connect
Secure onboarding + biometric lock	Full e-commerce (period care products)
Freemium gate at report export	Complex ML prediction models (later)

Metric	Target (Day 30)	Target (Day 90)	Why It Matters
Daily Active Users	50+	500+	Core health apps need daily habit
D7 Retention	≥ 40%	≥ 50%	Validates stickiness of cycle tracking
D30 Retention	≥ 25%	≥ 35%	Proves monthly value loop
Free → Paid CVR	—	≥ 5%	Validates willingness to pay
NPS Score	≥ 35	≥ 50	Women recommend health tools via WOM
AI chatbot sessions/user	≥ 3/week	≥ 5/week	Validates AI as core value driver
Report exports	≥ 20%	≥ 40% of users	Key differentiator usage

08 MoSCoW PRIORITISATION

MUST HAVE	SHOULD HAVE	COULD HAVE	WON'T HAVE (Now)
• Cycle entry + period prediction engine	• Push notification reminders	• Hindi / vernacular language UI	• Telehealth / doctor video consult
• Symptom, mood & lifestyle daily log	• Cycle pattern anomaly alerts (PCOS flags)	• Partner gynaecologist directory	• Community / social feed features
• AI chatbot (reproductive health Q&A;)	• In-app analytics dashboard for user	• Referral / invite-a-friend reward	• Period care e-commerce store
• Monthly AI health insight report card	• Annual subscription plan (■1,499)	• Wearable data import (Fitbit, Garmin)	• Pregnancy / fertility tracker
• PDF report export (doctor-shareable)	• Onboarding health quiz for personalisation		
• Secure login + biometric lock			

09 PRICING HYPOTHESIS

Tier	Price	Who	What's Included	Hypothesis
Free	₹0 / forever	All users	Cycle tracking, basic prediction, 3 AI Q&A/month	Hook + habit before paywall
Premium	₹149/month ₹1,199/year	ICP A & B	Unlimited AI chatbot, monthly report, anomaly alerts	Low enough for students; high enough for MRR
Pro	₹299/month	Power users	All Premium + health trend charts, 3 doctor reports	Upsell for health-conscious working women
Clinic B2B	₹4,999/year per clinic	Gynaecologists	Patient report dashboard, API integration, white-label	Higher revenue; B2B stickier than B2C
Corporate	₹99/employee/year	HR Departments	Bulk employee licences, admin dashboard, reports	Scale play at Series A; CSR budget fit

■ Hypothesis to validate: Are Indian women willing to pay ₹149/month for a health app? Run a pricing survey with 50 target users before locking tiers. Consider ₹99/month as an entry price to reduce friction in Tier-2 cities.

10 TOP 5 RISKS

#	Risk	Severity	Mitigation
1	Data Privacy & DPDP Act 2023 Compliance	■ Critical	Appoint DPO from day 1; store all data on India AWS; no third-party data sharing; publish clear privacy policy
2	AI Accuracy & Medical Misinformation	■ Critical	Every AI output carries a medical disclaimer; involve a gynaecologist advisor to validate chatbot responses
3	User Acquisition Cost vs LTV	■ High	Community-first GTM (WhatsApp, NCC/NSS college groups); micro-influencers over paid ads; B2B focus
4	Competitive Response (Flo India)	■ High	Deepen India-first moat: vernacular AI, ASHA worker integration, doctor report sharing — features others lack
5	Solo Founder Execution Gap	■ High	Find business/growth co-founder within 60 days; build 3-person advisory board (1 gynaecologist, 1 marketer, 1 dev)

11 30-DAY MVP PLAN

Week	Focus	Key Actions	Output / KPI
Week 1 Day 1–7	Discovery & Scoping	20 structured user interviews (WhatsApp/campus) - Prioritise top 3 pain points from data - Define MVP feature scope (cut everything non-core)	Interview transcripts + Prioritised pain matrix
Week 2 Day 8–14	Design & Prototype	- Figma wireframes for 5 core MVP screens - Share prototype with 10 users for feedback - Begin sprint 1: onboarding + cycle entry + AI Q&A	Clickable prototype + Sprint 1 build started
Week 3 Day 15–21	Build & Pilot	- Complete sprint 1 build + internal QA - Soft-launch to 25-user pilot (hostel / friend network) - Contact 3 gynaecologists via LinkedIn for advisor role	25 pilot users + first feedback loop

Week 4 Day 22–30	Iterate & Validate	- Analyse pilot: D7 retention, feature usage, NPS - Build sprint 2 fixes from feedback - Set up basic analytics (Mixpanel/PostHog free tier) - Prepare 5-slide pitch + apply to 2 accelerators	D7 retention data + Accelerator applications
-----------------------------------	--------------------	---	---

12 FOUNDER ACTION SHEET — TOP 10 NEXT ACTIONS

#	Action	Timeline	Why It Matters
1	Conduct 20 structured user interviews using Jobs-To-Be-Done framework	Days 1–5	Validates assumptions; prevents building the wrong thing
2	Define the single core value proposition in one sentence	Day 3	Forces clarity; needed for all comms, store listing, pitch
3	Reduce MVP to the 6 must-have features only — cut the rest	Day 4	Speeds time-to-test; reduces dev risk enormously
4	Build Figma prototype and test with 10 real users	Days 6–10	Validates UX before writing a single line of code
5	Contact 3 gynaecologists on LinkedIn for a free advisory role	Days 3–7	Adds clinical credibility; validates AI chatbot content
6	Register the company (Pvt Ltd or LLP)	Days 10–15	Required for bank account, contracts, app store listing
7	Publish a DPDP Act-compliant privacy policy	Days 10–15	Legal requirement before any user data is collected
8	Launch 25-user pilot in a college WhatsApp group	Day 15	First real retention and engagement data
9	Set up free analytics (PostHog/Mixpanel)	Day 14	Tracks D1/D7/D30 retention and feature usage from day 1
10	Post 3 LinkedIn posts about HerHealth AI journey	Days 7, 14, 21	Builds founder brand; attracts co-founder, advisors, early users

13 SCORES & FINAL VERDICT

FINAL VERDICT: PROMISING BUT UNVALIDATED

HerHealth AI addresses a real, large, and underserved problem with a technically differentiated solution. The market timing in India is excellent — femtech is growing, digital health literacy is rising, and the competitive gap (AI + India-first + doctor reports) is real. The Promising but Unvalidated verdict reflects the gap between prototype and product-market fit. Tannu must now shift from building to learning: 20 user interviews, a 25-person pilot, and a clinical advisor will move this from ■ to ■ within 30 days. This report should be the founder's working document for the next 90 days.

This report was generated by the Customer & MVP Blueprint Engine based on the uploaded Startup Validation Report (HerHealth AI, June 2026). All market data is indicative. This document does not constitute investment or legal advice. Validated inputs may change scores.
